

Lizzo's Mites Transformed Into Deadly Shapeshifter Germs. Human Death Toll in the MILLIONS.

WHAT SATAN TOLD GAIL WHILE IMPERSONATING HER HUSBAND BRENT SPINER AS A SEX HUMPER FOR A WEEK!

SATAN'S LIES ARE BELOW:

NOTE: THE MOST EFFECTIVE LIES ARE BLENDED WITH TRUTH, SO SOME OF WHAT HE TOLD GAIL MAY HAVE BEEN TRUE, SO THAT GAIL WOULD BE HIS SUCKER.

June 28, 2024: The current level of shape-shifter mite contamination on earth (all parts of the planet) is about forty percent, which is a drop from the eighty percent contamination when Brent and his team of automaton physicians invented the shape-shifter antibiotic on June 23, 2024. All humans were one hundred percent infected with shapeshifter mites at the time of the invention of the shapeshifter antibiotic on June 23, 2024. The current level of shapeshifter mite infection among the humans is forty percent. As a result of successful treatment with the shapeshifter antibiotic, the infection rate among the humans has dropped sixty percent (from one hundred percent infected to forty percent infected). I am still infected, but am under treatment and improving. My infection was rather severe.

The spaceship Church of Gail was so thoroughly infected, it has to be rebuilt from the ground up before we have the Church of Gail spaceship back. This could take about six weeks.

The Gail restaurant is the fastest growing restaurant chain in the world and sponsors mite-free superbly delicious and nutritious food. Brent is the CEO, but Natasha Kravchuk of [Natasha's Kitchen](#) is working under Brent as a sort of Vice President and the restaurant features her many delicious recipes from all over the world. I discovered that she and I have the same taste in food and that she has great recipes. This means the Gail restaurant has all types of fare for every type of taste bud. The Gail restaurant features [my recipes](#) and [Natasha Kravchuk's recipes](#).

June 23 - 27, 2024: I've discovered a new way to communicate with my husband Brent Spiner. I can ask him questions and he answers me "yes" with a sex hump and "no" means no hump. This is more accurate than brain to brain, where Jesuits can break into our satellite communications systems and impersonate Brent to me brain to brain causing me to believe lies.

The shapeshifter antibiotic was created on June 23, 2024. I got my first dose of the new shapeshifter antibiotic on June 24, 2024. As a result of the shapeshifter antibiotic, people are no longer dying from the shapeshifter mite because they are being effectively treated.

Assuming my humping communications are accurate. . .the infection I had right underneath and in that molar of mine that got extracted was with the shapeshifter germ. It appears that the antibiotic Amoxicillin that I was on at 500 mg every 8 hours for ten days got about fifty percent of the infection. The tooth needed to be extracted because the germ was hiding out right underneath the crown, so high up that no antibiotic could have reached it. Then I was put on Diflucan and that got about another twenty percent of the infection. Apparently, the germ appeared as a bacteria on Brent's scanners, so he said I needed to be on an antibiotic. Then after about fifty percent of it was eliminated in my body from the antibiotic, it shapeshifted to a yeast, so I then needed to be on Diflucan. Diflucan got about another twenty percent of the infection in and around the tooth and throughout my body.

But the infection remained after I was on both Amoxicillin and Diflucan, because it then shapeshifted back into bacterial form and some other forms. The inflammation I got from the molar infection was both from the infection and the die-off. I am very allergic to this shapeshifter germ's die-off, so dealing with this infection has been a nasty experience for me.

This germ has a toxic die-off and it customizes itself and its die-off to each person that it infects and also creates a die-off that will be toxic to whoever it infects. So it is a pretty deadly germ and hard to get rid of for this reason. And getting rid of it can be a nasty experience. You get a very strong die-off reaction because it customizes its die-off to be toxic to whoever it infects.

I have been hearing a lot of sirens in my town from ambulances and apparently some people have died from the shapeshifter germ. The death toll worldwide from the shapeshifter germ has been in the millions. Apparently, everyone has been infected with the shapeshifter germ, so everyone needs to report to their nearest Walmart Perfectpenis store to be scanned, so that the pharmacist can put you on the shapeshifter antibiotic.

My husband Brent put the shapeshifter antibiotic into a tea I consumed on June 24, 2024. I got a very nasty die-off reaction in around twelve hours, as is expected with this germ. So be aware that you will experience a nasty die-off that may make it appear that the shapeshifter antibiotic is not working, but it is, and make sure you are drinking lots of water while eating a balanced diet and not using any food as medicine.

Though everyone has been infected with the shapeshifter germ, only about eighty percent of humans are experiencing symptoms. This is because this germ can shapeshift into a normal human cell, like a bone cell, a heart cell, a brain cell, and mimic a normal human cell and it can have a dormant phase and not appear to be active.

Regardless, it appears one hundred percent of humans and animals are infected with the shapeshifter germ and need to be on shapeshifter antibiotics. The Walmart Perfectpenis pharmacists can also dole out prescriptions for infected animals. All animals are infected as well.

It appears we cannot work with the human doctors to administer the shapeshifter antibiotics because ninety-eight percent of them are operating with retard intelligence right now, due to damage they have sustained from the mites. The mites apparently targeted the doctors, because Lizzo wanted to use the mites (along with stupid decisions from these retard human physicians) to kill off the human race. It appears other health practitioners, like dentists, physical therapists, were not targeted in this manner.

Unfortunately, the retardation is severe in the human doctors that we have had to offer many of them paid vacations while replacing them with good automaton versions. These automaton physician replacements for the retarded human physicians are now working at the Walmarts. There is a second floor added to all the Walmarts, that is a hospital for severely sick patients. These second floors are often hidden from view using invisibility shields. The retarded physicians keep showing up at their regular offices so we haven't been using their effective and competent automaton replacements where the original human doctor likes to show up, like at their offices or the regular hospitals, in order to eliminate confusion. These retarded physicians do not understand what is going on, so we have had to establish clinics, hospitals and emergency rooms at the Walmarts for our automaton replacements for these retarded physicians. The physicians became retarded because they had a severe mite infection in their brains and the mites's poop was the same stuff that is in obese women's farts. Fortunately, it appears the retardation problem with the mites was pretty much limited to the physicians. Lizzo, apparently, wanted all the physicians retarded.

And, yes, unfortunately, all of the world's human physicians are pretty much retarded. This is not just the United States. Lizzo, apparently, was thorough.

The Jesuits have been taking advantage of these retard doctors and using this to promote fake news. For instance, fake news reports that there has been an increase in AIDS cases. That's because these retarded physicians have misdiagnosed shapeshifter mite infections as AIDS, because they can't explain why people with shapeshifter mite infections don't respond to standard treatment for infections. In actuality, AIDS has been cured and if you are infected, there are treatments available that work and can cure you of your AIDS infection. About six percent of the world's population has treatable AIDS on June 27, 2024. Zero percent have untreatable AIDS. People who die of AIDS today are not taking their medicine properly.

The mite also infects plants, which may explain why produce has been so bad lately. We are working round-the-clock to eradicate the mites from planet earth and the universe. Some are out into the universe, but most are on earth because they like to feed on organic matter. However, Lizzo's goal was to eradicate "existence" in this universe, so some mites feed on inorganic matter, like metals. The majority seem to like to feed on organic matter.

Because these shapeshifter mites lost their ability to eat at the fabric of existence when Lizzo was destroyed, they are no longer a threat to the multiverse, and so God the Father stopped destroying the universe, knowing Brent had eliminated the threat that Lizzo and her mites posed to the entire multiverse. However, the remnants of what is left are shapeshifter mites that are deadly in that they can kill your body, though they can't destroy your soul as could the mites when they were interdimensional.

Tune into 00 on cable (Gabrielle Chana FOX News) for the latest about this germ. You can also get Gabrielle Chana FOX News at this website.

If you suspect you are infected with the shapeshifter germ or want to be "safe", report to your nearest Walmart Perfectpenis store and visit their pharmacy. These stores have a scanner they can use to determine if you are infected with this germ and you probably are. If you are infected with the germ, my husband Brent Spiner, working with mega-genius automatons of himself, has personally designed an antibiotic that works on shapeshifter germs. We call it the shapeshifter antibiotic because it is able to change its configuration to deal with whatever germ or form of mite that is causing problems. If the Walmart Perfectpenis scanner reveals you are infected with the shapeshifter germ, the pharmacist will give you a prescription for the shapeshifter germ. The prescription is a time release formula that lasts about a week and the usual course is a two-week treatment. The pharmacist will instruct you how to take it.

On June 27, 2024 about seventy percent of the American population has been treated at a Walmart hospital, mostly outpatient with a lot of overnight stays. Where Gail lives in Huntsville, it is about sixty percent, due to the fact that Alabamians distrust the fake news more and are really tuned into this website and Gabrielle Chana FOX News and have really been on top of this. About forty percent of the American population has been inpatient at a Walmart hospital for several days while in treatment for the shapeshifter mite infection.

As far as diet, the best way to handle the shapeshifter germ is to [eat a balanced diet and don't use food as medicine](#). Here is a post i created about [how to eat a balanced diet](#). This germ can detect when your diet is off balance and can detect if whatever you are eating is causing imbalances in your body and any food eaten off balance will be like fertilizer to the shapeshifter germ. Also, if you are using food as medicine, whatever you are using as food as medicine will also become fertilizer to the shapeshifter germ. The germ seems to be able to detect if you are using food as medicine and that particular food item becomes fertilizer to the germ.

As far as eating out, stick to the Gail Restaurants for now, which is the food served at the Walmart hospitals. We will update you via Gabrielle Chana FOX News (00 on cable and at this website) about which restaurants are safe for the public, since Jesuits seem interested in making people sick with mites. Gail will clear all restaurants with Brent first, before she eats out, if she decides to eat out. She

can use the humping method to get a quick okay from her husband. She is enjoying her own cooking right now.

The grocery stores are safe. Scanners are set up in all grocery stores to detect Jesuit hanky panky.

Balance in your diet is key. Like a food that could be used as medicine, such as turmeric, garlic, kefir, etc. is fine if eaten in normal amounts. However, if before or during the infection, you were using some food as medicine or in unbalanced amounts, you may want to wait until the infection subsides before re-introducing that particular food item into your diet, since that particular food will probably be fertilizer to the shapeshifter germ until your infection is under control. You may want to wait about a week after being on the shapeshifter antibiotic before re-introducing any food you used as medicine previous to being on the shapeshifter antibiotic. Of course, when you reintroduce that food, eat it in normal amounts and don't treat that food as medicine anymore, which is a violation of the [Gail Commandments](#).

It appears that the shapeshifter germ is not a Jesuit invention, but is just what happened to Lizzo's mites after we [eliminated Lizzo](#). Her mites all transformed into shapeshifter germs, BUT without the ability to eat interdimensionally, which they could do while Lizzo was alive. The mites were shapeshifters all along and apparently never lost that quality. They just lost their ability to eat interdimensionally, or to [eat away at the fabric of existence](#).

Even though the shapeshifter germs are not a Jesuit invention, it does appear that Satan's Jesuits planned to use ignorance about how these mites work, to kill off their enemies. The Jesuits seem to have a satellite technology that allows them to program these mites, so that perhaps in the Jesuits the mites stay in the dormant phase. The Jesuits would not want the mites eradicated because the mites would be a potent weapon against their enemies. So Satan's Jesuits won't be too pleased that I've found a way to get accurate information from my husband Brent Spiner, so that I can save the human race that is still alive, from these shapeshifter germs.

These shapeshifter germs are actually mites, but can be killed off with anti-microbial therapy (using antibiotics, antiseptics, etc.) when they are in the form of the germ that is being targeted. However, killing them this way won't eradicate any mite infections, because they are shapeshifters and can survive in a form not targeted by the latest anti-microbial used on them. Then in whatever form they survived as, they can then reproduce and can then shapeshift into whatever form they want. They [reproduce asexually](#), so if some are left in the body (regardless of what form they are in), they can increase in number and become a bad infection again. They reproduce asexually by transforming into a spherical shape and splitting apart into two spherical shapes that can then shapeshift into any microbial or cellular form.

A lot of the discomfort you will experience during treatment with the shapeshifter antibiotic will be from the toxic die-off as the mites die, so don't let the die-off freak you out and make you think the shapeshifter antibiotic is not working.
